1971 INDEX OF FEATURE ARTICLES PUBLISHED IN

MATERIALS ENGINEERING

ALUMINUM AND ITS ALLOYS

Aluminum forgings combine light weight, high strength--July, p 14
Clad metals adapt to new uses--March, p 22
Cold rolled shapes and sections cut production and product costs--November, p 20
Combine function, appearance with perforated and expanded metals--May, p 44
Electroslag welding joins heavy sections--May, p 25
Engineer's guide to heat treatment--December, p 40
Glue-spot welding joins aluminum stronger than spot, cheaper than fusion--Jan p 14
How materials stand up to corrosion--February, p 36
Materials to fight marine environments--January, p 27
Modern metals make racing cars faster, more reliable--November, p 24
Novel optical materials replace glass--May, p 34
Problem solving with aluminum impacts--September, p 18
What's new in powder metallurgy--September, p 22

CASTINGS

Centrifugal casting cuts cost of large symmetrical parts--June, p 20
Finishes for die castings--September, p 48
Titanium castings combine light weight with corrosion resistance--August, p 20

CERAMICS, GLASS

Materials to fight marine environments--January, p 27
Welding ceramic parts--December, p 30

COATINGS, FINISHES

Automated plating cuts costs, ups coating performance--January, p 43
Coatings and finishes for plastics--August, p 42
Conductive coatings cut costs, simplify electrical design--November, p 48
Electrodeposited coatings--March, p 40
Finishes for die castings--September, p 48
Fluorocarbon finishes tackle tough service environments--October, p 47
How to select liquid and solid lubricants--December, p 60
How to test electrodeposited coating properties--January, p 46
New way to test coatings in hostile gas environments--May, p 50
Plasma sprayed coatings conquer corrosion, reduce abrasive wear--July, p 35
Scanning electron microscope new aid in surface studies--April, p 55
Tough vinyl coatings tame corrosion, up appearance--April, p 48
27 new finishes and coatings protect/decorate wide range of products--June, p 40

(continued on next page)

COPPER AND ITS ALLOYS

Cold rolled shapes and sections cut costs--November, p 20
Combine function, appearance with perforated and expanded metals--May, p 44
Engineer's guide to heat treatment--December, p 40
How materials stand up to corrosion--February, p 36
Materials to fight marine environments--February, p 27
What's new in powder metallurgy--September, p 22
Wrought copper alloys--April, p 20

ELECTRICAL AND ELECTRONIC PROPERTIES AND MATERIALS

Clad metals adapt to new uses--March, p 22
Conductive coatings cut costs, simplify electrical designs--November, p 48
Engineer's guide to ABS plastics--October, p 34
Engineer's guide to phenolic plastics--June, p 28
Engineer's guide to polyimide plastics--August, p 26
Selecting plastics for flame retardance--July, p 22
Silicone rubber resists heat, cold, creep and aging--January, p 20
Versatile engineering thermoplastic combines dimensional stability, resistance to heat and water--December, p 20
What's new in powder metallurgy--September, p 22
Wrought copper alloys--April, p 20

FORMING

Aluminum forgings combine light weight, high strength--July, p 14
Cold rolled shapes and sections cut production and product costs--November, p 20
Preheating improves properties and processing of cold formed parts--May, p 44
Specialty stainless steels--October, p 22
Wrought copper alloys--April, p 20

GENERAL

How materials stand up to corrosion--February, p 36
Material purchase specifications help cut costs, up quality--August, p 51
Materials to fight marine environments--January, p 27

HIGH TEMPERATURE PROPERTIES AND MATERIALS

Aluminum forgings combine light weight, high strength and smooth finish--July, p 14
Clad metals adapt to new uses--March, p 22
Engineer's guide to ABS plastics--October, p 34
Engineer's guide to phenolic plastics--June, p 28
Engineer's guide to polyimide plastics--August, p 26
Selecting plastics for flame and fire retardance--July, p 22
Silicone rubber resists heat, cold, creep and aging--January, p 20
Versatile engineering thermoplastic combines dimensional stability, resistance to heat and water--December, p 20

(continued on next page)

JOINING AND FASTENING

Electroslag welding joins heavy sections--May, p 25
Glue-spot welding joins aluminum stronger than spot, cheaper than fusion--Jan, p 27
How to fasten and join plastics--March, p 32
Welding ceramic parts--December, p 30

MAGNESIUM AND ITS ALLOYS

Engineer's guide to heat treatment--December, p 40
How materials stand up to corrosion--February, p 36
Modern metals make racing cars faster, more reliable--November, p 24

NONMETALLIC MATERIALS (NOT ELSEWHERE)

Engineer's guide to felt--November, p 34

PLASTICS

Coatings and finishes for plastics--August, p 42
Engineer's guide to ABS plastics--October, p 34
Engineer's guide to phenolic plastics--June, p 28
Engineer's guide to polyimide plastics--August, p 26
Engineer's guide to UHMW polyethylene--September, p 34
Flame test methods for plastics--October, p 56
Fluorocarbon finishes tackle tough service environments--October, p 47
How materials stand up to corrosion--February, p 36
How to fasten and join plastics--March, p 32
Materials to fight marine environments--January, p 27
Novel optical materials replace glass--May, p 34
Selecting plastics for flame and fire retardance--July, p 22
Tough vinyl coatings tame corrosion, up appearance--April, p 48
Versatile engineering thermoplastic combines dimensional stability, resistance to heat and water--December, p 20

RUBBER

Engineer's guide to polysulfide rubber--April, p 38
How materials stand up to corrosion--February, p 36
Silicone rubber resists heat, cold, creep and aging--January, p 20

STEEL

Centrifugal casting cuts costs of large symmetrical parts--June, p 20
Clad metals adapt to new uses--March, p 22
Cold rolled shapes and sections cut production and product costs--November, p 20
Combine function, appearance with perforated and expanded metals--May, p 44

(continued on next page)

Electroslag welding joins heavy sections--May, p 25
Engineer's guide to heat treatment--December, p 40
How materials stand up to corrosion--February, p 36
Materials to fight marine environments--January, p 27
Modern metals make racing cars faster, more reliable--November, p 24
Preheating improves properties and processing of cold formed parts--May, p 22
Specialty stainless steels--October, p 22
What's new in powder metallurgy--September, p 22

TESTING AND INSPECTION

Comparators take guesswork out of surface roughness--June, p 50
How to test electrodeposited coating properties--January, p 46
Hardness testing assures reliable materials--July, p 39
Flame test methods for plastics--October, p 56
Material purchase specifications help cut costs, up quality--August, p 51
New way to test coatings in hostile gas environments--May, p 50
Quick tests for identifying materials--November, p 54
Scanning electron microscope new aid in surface studies--April, p 55
Sub-micron particle classification now possible--December, p 66
Value engineering cuts ordnance costs--March, p 50

TITANIUM AND ITS ALLOYS

Cold rolled shapes and sections cut production and product costs--November, p 20
Engineer's guide to heat treatment--December, p 40
How materials stand up to corrosion--February, p 36
Materials to fight marine environments--January, p 27
Modern metals make racing cars faster, more reliable--November, p 24
Titanium castings combine light weight with corrosion resistance--August, p 20
What's new in powder metallurgy--September, p 22

(continued on next page)

INDEX OF AUTHORS

Beck, Ronald D., Coatings and finishes for plastics--August, p 42
How to fasten and join plastics--March, p 32

Benning, A. C., How to test electrodeposited coating properties--January, p 46

Chepko, F. E., Preheating improves properties and processing of cold formed parts--May, p 22

Everhart, J. L., Specialty stainless steels--October, p 22

Fabian, R. J., Engineer's guide to polyimide plastics--August, p 26
Engineer's guide to UHMW polyethylene--September, p 34
Selecting plastics for flame retardance--July, p 22
Silicone rubber resists heat, cold, creep and aging--January, p 20
Versatile engineering thermoplastic combines dimensional stability resistance to heat and water--December, p 20

Fabian, R. J., Vaccari, J. A., How materials stand up to corrosion and chemical attack--February, p 36

Florentine, Dr. E. P., Jr., Rendine, R. D., Engineer's guide to phenolic plastics--June, p 28

Gurney, J. J., Automated plating cuts costs, ups performance of electroplates--January, p 43

Jentgen, R. L., How to select liquid and solid lubricants--December, p 60

Johari, Dr. O., Scanning electron microscope new aid in surface studies--April, p 55

Krashes, D., Material purchase specifications help cut costs, up quality--August, p 51

Lem, J. L., Schenk, C. H., New way to test coatings in hostile gas environments--May, p 52

LoFaro, H. W., Engineer's guide to felt--November, p 34

Mara, P. V., Problem solving with aluminum impacts--September, p 18

Masubuchi, Prof. K., Materials to fight marine environments--January, p 27

Miska, K. H., Aluminum forgings combine light weight, high strength and smooth finish--July, p 14
Centrifugal casting cuts costs of large symmetrical parts--June, p 20
Cold rolled shapes and sections cut production and product costs--November, p 20

(continued on next page)

Electroslag welding joins heavy sections--May, p 25
Engineer's guide to heat treatment--December, p 40
Modern metals make racing cars faster, more reliable--November, p 24
Titanium castings combine light weight, corrosion resistance--August, p 20
What's new in powder metallurgy--September, p 22
Wrought copper alloys--April, p 20

Mock, J. A., Combine function, appearance with perforated and expanded metals--May, p 44
Electrodeposited coatings--March, p 40
Finishes for die castings--September, p 48
Fluorocarbon finishes tackle tough service environments--October, p 47
Hardness testing assures reliable materials--July, p 39
Quick, easy tests help identify materials--November, p 54
Tough vinyl coatings tame corrosion, up product appearance--April, p 48
27 new finishes and coatings protect/decorate wide range of products--June, p 40
